Put (✓) or (X):

- 1 A website is one or more Web Pages linked together under a specific name ()
- 2 A website is a web address called a Title ()
- 3 A website is a document with electronic content published on the Internet. ()
- 4 The home page is the first page of a website and through it, the rest of the web pages are navigated. ()
- 5 The worksheet is the first page of the website from which the rest of the web pages are navigated. ()
- 6 HTML stands for Hyper Text Markup Language ()
- 7 An interactive web page is affected by the user's operations ()
- 8 Web pages that use only HTML in their design are considered interactive. ()
- 9 To design an interactive web page, we use languages like php and Java Script ()
- 10 A static web page is written in PHP. ()
- 11 The web page address appears in the address bar of the browser window ()
- 12 A static page is a page that is designed using HTML commands and Java Script ()
- 13 Web page components are text-only ()
- 14 In the setup stage of creating a website, a folder is created to save the required images ()
- 15 In the setup phase, text data, images, and video footage are collected and saved in a folder ()
- 16 The publishing stage is the last stage of website design and creation ()

- 17 The publishing stage is where the text data, images, and video footage are compiled and saved in a folder ()
- 18 The design stage when the website is allocated a storage space. ()
- 19 The implementation stage where the paper design is converted into web pages. ()
- 20 Publishing the website online means putting the data into web pages. ()
- 21 The web page does not accept text. ()
- 22 Images that appear on the web page must be grayscale only. ()
- 23 A web page cannot contain images and text at the same time. ()
- 24 Most HTML commands have a beginning $\langle \rangle$ and an end $\langle \rangle$. ()
- 25 HTML commands are required to be capitalized and lowercase. ()
- 26 HTML is a coding language used to create static web pages. ()
- 27 The area for writing information for the browser such as the page title is $\langle \text{Head} \rangle$. ()
- 28 Body is the area for writing the content that will appear on the page. ()
- 29 To add content to a web page we use the Title command ()
- 30 The structural structure of a web page includes the Body command. ' ()
- 31 The title of the web page is written inside the Body area. ' ()
- 32 Notepad cannot be used to write HTML commands ' ()
- 33 body is the area for writing the content of the page ' ()
- 34 The title of a web page appears in the address bar of the browser window ()
- 35 HTML commands can be written in upper or lower case ' ()
- 36 The dir property is used to change the orientation of a web page ' ()

- 37 The browser is not affected by trailing spaces within the command file of a web page ()
- 38 “RTL” is used to change the orientation of a web page from right to left ()
- 39 “ltr” is used to change the orientation of a web page from right to left ()
- 40 The text that appears on a web page can be formatted ()
- 41 We use the command ”br” to end typing on the current line and start typing on a new line ()
- 42 Centering text is a text formatting operation. ()
- 43 To place text in the middle of a line we use the command <center> ()
- 44 One of the web page formats is to put an image as the background of the page ()
- 45 To end typing on the current line and start typing on a new line, use the < center > command ()
- 46 An image can be placed as the background of a web page. ’ ()
- 47 Page formatting involves changing the background color of the web page ’ ()
- 48 We use the background property of the <body> command to place an image as the background of a web page. ’ ()
- 49 It is not possible to change the background color of a web page ()
- 50 We use the back color property of the <body> command to set an image as the background of the web page. ()
- 51 Page formatting involves changing the background color of the web page ()
- 52 In a web page, fonts are formatted using the < font > command ()
- 53 The command's face property is used to specify the font type ()
- 54 In a web page, fonts are formatted using the command ()

- 55 The size property of the `` command is used to specify the color of the font ()
- 56 If the `` command is not used, the font type appears on the web page by default ()
- 57 The color property `` `` is used to specify the font color ()
- 58 To show an image on a web page we use the `` command ()
- 59 Image dimensions are measured in pixels ()
- 60 The middle value of the align property is used to align the image to the far right of the web page ()
- 61 The alignment of the image on the web page is controlled by the Align property ()
- 62 To execute the `` command, you need the name of the image and its storage location ()
- 63 The left value of the align property is used to align the image to the far left of the web page ()
- 64 The `<embed>` command is used to add audio or video to a web page ()
- 65 The Src property associated with the `<embed>` command is used to specify the name and path of the video file ()
- 66 The `<embed>` command supports video files of type avi ()
- 67 The value of the Src property consists of the video file name and extension only in all cases ()
- 68 The `<embed>` command does not support video files of type mov ()
- 69 The value of the Src property consists of the video file name and extension only in the same folder as the website ()
- 70 A hyperlink is a property used to navigate between web pages ()
- 71 The `<a>` command is used to create a hyperlink ()

- 72 A hyperlink is a text or image that is linked to an address within the same page or to another page within the same or another site. ()
- 73 To create a hyperlink we use the <a> command ()
- 74 A hyperlink only comes in the form of text within a web page ()
- 75 The href property associated with the <a> command whose value specifies the address to go to ()

Choose the correct answer:

1-HTML and other web programming languages are used in the

(Design - Publishing - Planning – Implementation)

2-The website has an address on the Internet and is called

(web address - web site - web page)

3- The website can be visited through.....

(website address - teacher code - control panel – taskbar)

4-A/an..... web page is a page that is designed using HTML commands in addition to other languages such as JavaScript, PHP and others.

(Static - Interactive - Basic – Dummy)

5-..... Web Pages Displays information for viewing only

(Interactive - Basic – Static)

6- One of the characteristics of a static web page is that it is written in.....

(HTML -PHP -Java Script Visual Basic)

7- The first stages of designing and creating a website.....

(Planning - Design - Preparation – Implementation)

8- The stage in which textual data, images and video footage are collected and saved in a folder

(Preparation - Planning - Planning - Implementation – Design)

9-HTML commands should be saved with the extension.....

(html - jpg - docx – js)

10- The html code is written using.....

(Browser - Paint - Text Editor – GIMP)

11- To add an address to a webpage we use the command

(Html - Title - Head - Body)

12- The Title command is written in the HTML

(outside the Head area - inside the Body area - inside the Head area)

13- We useproperty to change the direction of the page from left to right

(right - ltr - rtl - left)

14- To change the direction of the page from right to left, we use the dir property value of the command.....

(Head - Title - Body -HTML)

15- We use to finish writing in the current line and start writing in a new line.

(br - ltr – rtl – body)

16- We use to put text in the middle of the line.

(Center - Title – Body - Head)

17- We use the code..... to place the image school.jpg which is stored in the same page storage folder as the backdrop of the web page.

a- <body backimage = "school.jpg">

b- <back ground = "school.jpg">

c- <back bgcolor = "school.jpg">

d- <body background = "school.jpg">

18- We use the property..... of the command `< body >` to put an image as a background to the web page.

(Background – Body – -Title Center)

19- To put a line under writing on the web page we use the command.....

(`<U>` - `<i>` –`` - `<r>`)

20- We useto make the writing appear on the web page in italics.

(`<U>` - `<i>` –`<s>` - ``)

21- The name of the image and the location of its storage is determined by the property.....

(Pixel - Src – Scr – Color)

22-we add the value..... to the align property to make the text located along the lower edge of the image

(top - middle – bottom – left)

23- `< embed >` does not support video files of the type.....

(avi - flv – mov – swf)

23- The name and location of the video file is determined by the property.....

(background - width – height – src)

24- The hyperlink is..... It can be linked to an address inside the same page

(text only - image only - text or image - special marks)

25- To create a hyperlink we use.....

(`<a>` - `` - `
` - `<c>`)

- 75 The href property associated with the <a> command whose value specifies the address to go to (✓)

Choose the correct answer:

1-HTML and other web programming languages are used in the

(Design - Publishing - Planning – **Implementation**)

2-The website has an address on the Internet and is called

(**web address** - web site - web page)

3- The website can be visited through.....

(**website address** - teacher code - control panel – taskbar)

4-A/an..... web page is a page that is designed using HTML commands in addition to other languages such as JavaScript, PHP and others.

(Static - **Interactive** - Basic – Dummy)

5-..... Web Pages Displays information for viewing only

(Interactive - Basic – **Static**)

6- One of the characteristics of a static web page is that it is written in.....

(**HTML** -PHP -Java Script Visual Basic)

7- The first stages of designing and creating a website.....

(**Planning** - Design - Preparation – Implementation)

8- The stage in which textual data, images and video footage are collected and saved in a folder

(**Preparation** - Planning - Planning - Implementation – Design)

9-HTML commands ~~should~~ be saved with the extension.....

(html - jpg - docx – js)

10- The html code is written using.....

(Browser - Paint - Text Editor – GIMP)

11- To add an address to a webpage we use the command

(Html - Title - Head - Body)

12- The Title command is written in the HTML

(outside the Head area - inside the Body area - inside the Head area)

13- We useproperty to change the direction of the page from left to right

(right - ltr - rtl - left)

14- To change the direction of the page from right to left, we use the dir property value of the command.....

(Head - Title - Body -HTML)

15- We use to finish writing in the current line and start writing in a new line.

(br - ltr – rtl – body)

16- We use to put text in the middle of the line.

(Center - Title – Body - Head)

17- We use the code..... to place the image school.jpg which is stored in the same page storage folder as the backdrop of the web page.

a- <body backimage = "school.jpg">

b- <back ground = "school.jpg">

c- <back backcolor = "school.jpg">

d- <body background = "school.jpg">

18- We use the property..... of the command < body > to put an image as a background to the web page.

(Background – Body – -Title Center)

19- To put a line under writing on the web page we use the command.....

(<U> - <i> – - <r>)

20- We useto make the writing appear on the web page in italics.

(<U> - <i> –<s> -)

21- The name of the image and the location of its storage is determined by the property.....

(Pixel - Src – Scr – Color)

22-we add the value..... to the align property to make the text located along the lower edge of the image

(top - middle – bottom – left)

23- < embed > does not support video files of the type.....

(avi - flv – mov – swf)

23- The name and location of the video file is determined by the property.....

(background - width – height – src)

24- The hyperlink is..... It can be linked to an address inside the same page

(text only - image only - text or image - special marks)

25- To create a hyperlink we use.....

(<a> - -
 - <c>)
